

SIMULATED DATA

All rows are invented for a portfolio project. They do not describe real people, referrals, or organisations, and no findings from them should be treated as real.

Data as at 31/08/2026. Referrals received 01/06/2026 to 28/08/2026.

Field definitions

Field	Description
ReferralID	Unique code for each referral.
DateReceived	Date the referral arrived in the service inbox.
ClientCode	Anonymous client code (no names). A client may be referred more than once.
ReferrerType	Who sent the referral.
Ethnicity	Self-identified ethnic group, where recorded.
PriorityLevel	Urgency assigned at triage (Urgent, High, Routine).
InfoComplete	Whether the referrer supplied all required information (Yes/No).
DateFirstContact	Date the service first contacted (or tried to contact) the client.
ContactMethod	Phone, Text, Email or In person.
Status	New, Contacted, Awaiting info, Consent pending, Enrolled, Unable to contact, Declined.
ConsentObtained	Yes, No or Pending.
AppointmentDate	First appointment date, if booked.
Escalated	Whether the referral was escalated to a clinician (Yes/No).

About this workbook

Purpose	Excel workbook that logs service referrals, flags overdue first contact and data problems, and summarises performance for a service manager. Portfolio project.
Data	Simulated: all 120 referrals are invented and do not describe real people, referrals or organisations. Referrals received 01/06/2026 to 28/08/2026; data as at 31/08/2026.
Data-quality checks	QualityFlag looks for: missing priority, missing referrer type, first contact dated before the referral was received, enrolled without consent recorded as Yes, possible duplicate client (same client code on more than one referral), and ethnicity not recorded. Dropdown lists limit entries for PriorityLevel, Status and ConsentObtained.
Assumptions	Target days to first contact (Urgent 1, High 3, Routine 7) are my own assumptions, not from a real service. The percentage targets on Settings (80% contacted within target, 95% records passing checks) are also assumed. Days are calendar days, not working days.
Limitations	Results show how the workbook works, not real performance. Numbers per ethnic group are small, so the equity view is for monitoring only and no conclusions should be drawn. With real data, findings would be reviewed with the team.
Privacy	Uses anonymous client codes: no names or contact details. With real data, information would need to be stored and shared in line with the service's privacy policies and the Health Information Privacy Code 2020, with access limited to those who need it.
How to update	Add new referrals in the next empty row of the Referrals table; the calculated columns fill in automatically. Change the as-at date on Settings. Check the QualityFlag column and the Checks sheet for flagged records. The Summary updates automatically, except the month table, which needs a new month row added by hand.
