

Referral Service Summary (simulated data)

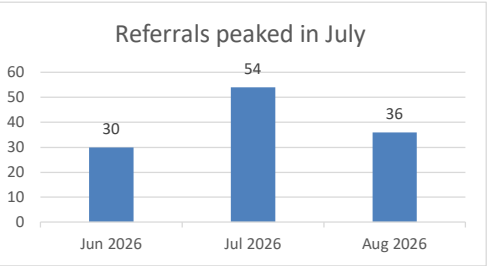

Simulated data. Targets are assumptions set on the Settings sheet.

Headline measures

Total Referrals	Contacted within target	Overdue: not contacted	Urgent not escalated	Records passing checks
120	65%	5	4	78%
Targets (assumed)	Target 80%			Target 95%

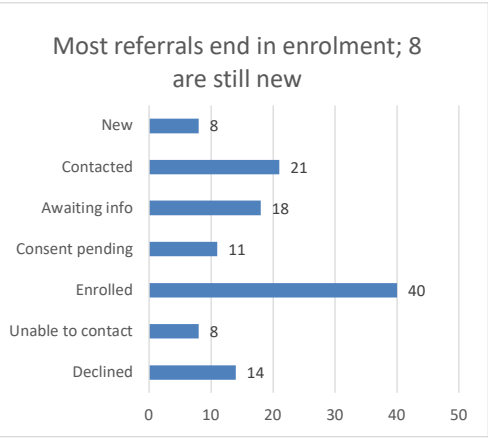

Referrals by month

Month starting	Referrals
Jun 2026	30
Jul 2026	54
Aug 2026	36

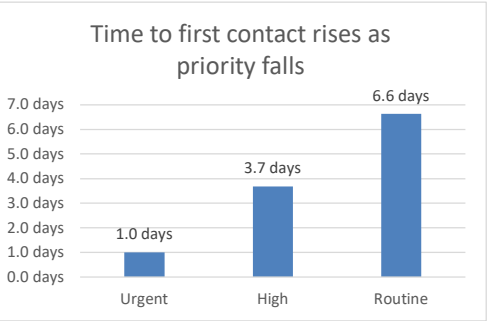

Referrals by status

Status	Referrals
New	8
Contacted	21
Awaiting info	18
Consent pending	11
Enrolled	40
Unable to contact	8
Declined	14

Time to first contact

Priority	Avg days to first contact
Urgent	1.0 days
High	3.7 days
Routine	6.6 days

Simulated data with small numbers per group: no conclusions should be drawn. With real data, review this view with the team to check that timeliness is equitable.

Key findings

- 65% of contacted referrals were reached within the assumed target times (target 80%); 37 were contacted late.
- 5 referrals are overdue for first contact.
- 4 urgent referrals have no escalation recorded and should be reviewed.
- 27 of 120 records carry a data-quality flag (missing fields, possible duplicates, or inconsistent dates or consent).

Recommended actions

- Contact the 5 overdue referrals and record the outcome.
- Confirm escalation decisions for the 4 urgent referrals.
- Correct the 27 flagged records with referrers, starting with the 5 that have no priority.
- Review whether target times are realistic, since routine referrals average about 6.6 days to first contact.

Based on simulated data and assumed targets.
